

MEDICAL DEVICES

MEDICAL DEVICES

Since its creation in 1985, Laboratoires Euromedis is specialized in the manufacture and distribution of single use medical devices and has become one of the principal suppliers to public and private healthcare institutions.

Protecting ourselves and our patients is our priority. Euromedis has developed a complete range of protective elements for every person and every situation.

Non-sterile gloves

REGULATION (EU) 2016/425: PERSONAL PROTECTIVE EQUIPMENT

NF EN ISO 374-1

Protective gloves for use when handling dangerous chemicals and micro-organisms - Part 1: Terminology and performance requirements for chemical risks. This standard specifies the requirements for protective gloves intended to protect the user against dangerous chemicals and defines the terms to be used. In accordance with this standard, gloves are classified into 3 categories: Type A, Type B or Type C, depending on their level of permeation performance and the number of chemicals which they can protect users against. The table below shows the performance level and the number of chemicals required for each category. These tests are carried out in accordance with NF EN 16523-1+A1.

Category	Minimum required performance level	Minimum number of chemicals out of 18 listed
A	2 (transit time ≥ 30 min.)	6
B	2 (transit time ≥ 30 min.)	3
C	1 (transit time ≥ 10 min.)	1

Permeation performance levels

Measured breakthrough time (min)	Permeation performance level
> 10	1
> 30	2
> 60	3
> 120	4
> 240	5
> 480	6

List of test chemicals according to NF EN ISO 374-1

Letter code	Chemical	CAS number	Class
A	Methanol	67-56-1	Primary alcohol
B	Acetone	67-64-1	Cetone
C	Acetonitrile	75-05-8	Nitrile compound
D	Dichloromethane	75-09-2	Chlorinated
E	Carbon disulphide	75-15-0	Organic compound containing sulphur
F	Toluene	108-88-3	Aromatic hydrocarbon
G	Diethylamine	109-89-7	Amine
H	Tetrahydrofuran	109-99-9	Heterocyclic ether compound
I	Ethyl acetate	141-78-6	Ester
J	n-Heptane	141-82-5	Saturated hydrocarbon
K	Sodium hydroxyde 40%	1310-73-2	Inorganic base
L	Sulphuric acid 96 %	7664-93-9	Inorganic oxidant mineral acid
M	Nitric acid 65 %	7697-37-2	Inorganic oxidant mineral acid
N	Acetic acide 99%	64-19-7	Organic acid
O	Ammonia 25%	1336-21-6	Organic base
P	Hydrogen peroxide 30%	7722-84-1	Peroxide
S	Hydrogen fluoride 40%	7664-39-3	Inorganic mineral acid
T	Formaldehyde 37%	50-00-0	Aldehyde

NF EN ISO 374-2

Protective gloves for use with dangerous chemicals and micro-organisms - Part 2:

Determination of resistance to penetration. This standard specifies a test method for the penetration resistance of gloves that protect the user from dangerous chemicals and/or micro-organisms.

NF EN ISO 374-4

Protective gloves for use with dangerous chemicals and micro-organisms - Part 4:

Determination of resistance to degradation by chemicals. This standard specifies the test method to determine the resistance of protective glove materials to degradation by dangerous chemicals under continuous contact conditions.

NF EN ISO 374-5

Protective gloves for use with dangerous chemicals and micro-organisms - Part 5:

Terminology and performance requirements for micro-organisms risks. This standard specifies a test method for determining the penetration resistance of gloves intended to protect the user against micro-organisms.

NF EN ISO 21420

Protective gloves - General requirements and test methods.

This standard defines the general requirements and relevant test procedures for glove design and manufacturing, resistance of the gloves materials to water penetration, innocuousness, comfort and efficiency, marking and information supplied by the manufacturer, applicable to all protective gloves.

NF EN 16523-1+A1

Determination of material resistance to permeation by chemicals - Part 1:

Permeation by potentially hazardous liquid chemicals under continuous contact conditions. This standard specifies a test method to determine the resistance of protective clothing, gloves and footwear materials to permeation by potential hazardous liquid chemicals under continuous contact conditions.

REGULATION (EU) 2017/745 – MEDICAL DEVICES

NF EN 455-1+A1 STANDARD

Single use medical gloves - Part 1:

Requirements and tests to detect the absence of holes. This standard specifies the requirements and provides the test method for determining the absence of holes in single-use medical devices.

NF EN 455-2 STANDARD

Single use medical gloves - Part 2:

Requirements and testing for physical properties. It specifies the requirements and test methods relating to the physical properties of single-use medical gloves (i.e. surgical gloves and examination and nursing gloves), to ensure that they provide and maintain a sufficient level of protection against cross-contamination, both for the patient and the user while they are being used.

NF EN 455-3 STANDARD

Single use medical gloves - Part 3:

Requirements and testing for biological evaluation. This standard specifies requirements for the evaluation of biological safety for single use medical gloves. It provides requirements for labelling and the disclosure of information relevant to the test methods used.

NF EN 455-4 STANDARD

Single use medical gloves - Part 4:

Requirements and testing for shelf-life determination. This standard specifies the requirements and test methods to determine the shelf life of single-use medical gloves, as well as labelling requirements and the disclosure of information which is relevant to the test methods used.

All non-sterile examination gloves have an AQL of 1.5.

User risks	Low due to a lack of latex proteins, but does contain chemical ingredients. Ideal for people prone to allergies.	Related to the presence of latex, people may suffer immediate reactions, including respiratory problems, itching, urticaria, etc. Risk of type I and IV allergy.	Low due to a lack of latex proteins, but does contain chemical ingredients. Risk of type IV allergy.
Use	Short-term procedures not involving blood or body fluids.	Use for precise actions requiring sensitivity and dexterity.	Use for precise actions requiring sensitivity and dexterity with the advantage of being less allergenic and more chemical resistant.

Non-sterile gloves

NITRILE GLOVES

RESISKIN - POWDER-FREE
Recommended for people who cannot use latex gloves.

- **Standard cuff - 240 mm**
Resistant to many chemicals.
Sold by case - A case contains 10 boxes with 100 units in each. Pallet with 54 cases.
- **Long cuff - 300 mm**
Resistant to many chemicals.
Sold by case - A case contains 10 boxes with 100 units in each. Pallet with 45 cases.
- **Extra-long cuff - 400 mm**
Ideal for cleaning endoscopes and handling cytostatic agents.
Sold by case - A case contains 10 boxes with 50 units in each. Pallet with 36 cases.

SENSISKIN - POWDER-FREE
Soft nitrile glove that allows for a high level of sensitivity. Used for decontamination, cleaning, and handling cytostatic agents (high solvent resistance). Category III certified.

- **Violet-blue**
Sold by case - A case contains 10 boxes with 100 units in each. Pallet with 66 cases.
- **Black**
Sold by case - A case contains 10 boxes with 100 units in each. Pallet with 66 cases.

NITRIGRIP - POWDER-FREE
Resistant nitrile glove for industrial settings. Orange colour for better visibility. Diamond texture on the palm and fingers for maximum grip.
Sold by case - A case contains 10 boxes with 50 units in each.

Our ESSENTIALS

**EURONYL®
POWDER-FREE**

Ambidextrous vinyl gloves. High quality that meets demanding requirements.
Precautions for use: It is not recommended to touch food products containing oils and/or fats while wearing powder-free or powdered vinyl gloves..

Sold by case - A case contains 10 boxes with 100 units in each. Pallet with 72 cases.

Non-sterile gloves

LATEX

EUROTEX® - POWDER-FREE

Glove designed for users requiring sensitivity.

Precautions for use: This product contains natural rubber latex which may cause allergic reactions or even anaphylactic shock.

Sold by case – A case contains 10 boxes with 100 units in each. Pallet with 54 cases.

EUROTEX® - POWDERED

The essential standard in our latex line. Pre-powdered with corn starch. Ambidextrous.

Precautions for use: This product contains natural rubber latex which may cause allergic reactions or even anaphylactic shock.

Sold by case – A case contains 10 boxes with 100 units in each. Pallet with 54 cases.

FINESSIS® CORIUM	Microsurgery or as liners		0,19 MM	Green		
FINESSIS® AEGIS (EX G VIR)	Risky, aseptic surgery		0,29 MM	Green & white		

FINESSIS® EUROMEDIS LINE

Flexylon®, a revolutionary material, creates gloves with unbeatable levels of waterproofing and protection. The use of this material produces films of the highest quality, offering:

- a better seal, with no porosity, guaranteeing quality assurance levels (AQL) of 0.1 instead of 1.5
- the absence of vulcanisation and curing accelerators provides an answer to ‘type I’ (latex) and ‘type IV’ (accelerator) allergies.
- an incomparable barrier effect
- high comfort during use and low pressure on the skin, as the material moulds perfectly to the hand

AEGIS

For high-risk or aseptic surgery. The G VIR technology acquired by our partner Adventa Health, then enhanced by the use of Flexylon®, enables us to limit the thickness of the glove. Thanks to the combination of the barrier effect and disinfectant agents between the two elastomer layers, the AEGIS glove provides additional protection and safety for users who may be confronted with an AEB* in the presence of known bacterial or viral agents.

*AEB: Accidental exposure to blood.

POLYMER-COATED TREATMENT

Polymer-coated gloves avoid secondary reactions due to excessive chlorination and improve glide and makes them easier to put on.

Sterile gloves

FINESSIS® ZERO - SYNTHETIC SURGICAL GLOVE

Latex- and accelerator-free synthetic surgical glove. Made from a synthetic material: Flexylon®. High-performance synthetic elastomer offering unrivalled waterproofing and barrier protection. Manufacturing technology that produces films of the highest quality. No intrinsic material porosity. AQL = 0.1 No vulcanisation accelerators or other chemical residues. High comfort thanks to its anatomical shape and low pressure on the skin. Anti-wrap rolled-edge cuff. Colour: white.

Sold by box - A case of 4 boxes with 50 pairs in each. Pallet with 27 cases.

Reference	Description
114907G	Size 5 1/2
114900G	Size 6
114901G	Size 6 1/2
114902G	Size 7

114906G	Size 9

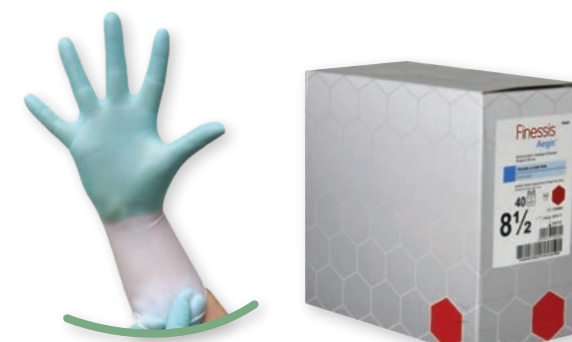

FINESSIS® CORIUM - SYNTHETIC SURGICAL GLOVE

Latex- and accelerator-free synthetic surgical glove. Made from a synthetic material: Flexylon®. Corium is primarily intended for use as a liner. Wearing a glove over them is very easy, with any type of external glove. Synthetic elastomer that provides unbeatable waterproofing and barrier protection. No intrinsic material porosity. AQL = 0.1 Without vulcanisation accelerators or other chemical residues. Anatomically shaped for maximum comfort. Anti-wrap rolled-edge cuff. Colour: green.

Sold by box - A case of 4 boxes with 50 pairs in each. Pallet with 30 cases.

Reference	Description
114910	Size 6
114911	Size 6 1/2
114912	Size 7

114914	Size 8
114915	Size 8 1/2
114916	Size 9

FINESSIS® AEGIS - SYNTHETIC SURGICAL GLOVE

Synthetic Flexylon® surgical glove, latex- and accelerator-free, with a disinfectant liquid encapsulated inside the glove, in its middle layer. No contact between the disinfectant and the skin and/or patient under normal conditions of use. The antiseptic solution is released only when the glove breaks, at the site of damage only, and in the quantity present at that point. Reduces the viral load (enveloped viruses) transmitted in the event of a percutaneous accident. Colours: green and white.

Sold by box - A case of 4 boxes with 40 pairs in each. Pallet with 30 cases.

Reference	Description
114920	Size 6

FLAT PAPER CAP
Suitable for use in hospital and industrial settings. Made from white paper with a blue trim, intended for the food industry, 80 g/m², adjustable with perforated bottom.

Sold by case. Box/100. Case/1000.

Reference	Description
161153	White <i>While stock lasts</i>
161154X	With blue trim

SURGICAL CAP
25 g/m² surgical cap. Blue. Prevents hair loss in sterile areas to maintain a clean environment and provides a barrier against liquid splashes.

While stock lasts

Sold by case. Bag/100. Case/1000.

Reference	Description
161151J	Blue

UNIVERSAL CAP
42 g/m² cap in viscose. Air permeability and good head coverage. It meets hospital hygiene requirements in surgical settings. Colours: blue or green. Diameter: 56.5 cm.

Sold by case - Box/100. Case/500.

Reference	Description
161151	Blue
161152	Green

VISOR CAP
White fishnet cap with visor, with or without neck warmer. 80 g/m² protective visor, 10 g/m² fishnet cap and 35 g/m² neck warmer.

Sold by case - Bag/100 Case/1000.

Reference	Description
161131X	Without neck warmer
161132X	Neck warmer

NON-WOVEN ROUND BOUFFANT CAP
Round shape with flexible, soft elastic. Grammage: 14 g/m².

Sold by case.

161125X	White- bag of 100. Case of 1000
161126X	Blue - bag of 100. Case of 1000

BOUFFANT CAP
For head and hair protection. Made with double elastic clip. Easy to handle. Compression folding. One size fits all. Grammage: 14 g/m².

Sold by case - A case contains 1000 units.

Reference	Description
161130	White. Box of 250.
161139	White. Bag of 100.

HAIR NET
Covers all the hair for optimum protection. Blue nylon.

Sold by case.

Reference	Description
161441	Bag/100. Case/1000.

Our ESSENTIALS

**3-PLY MASK
TYPE II AND IIR**

Disposable medical face mask with nose bridge. Non-sterile. Adult size. Bacterial filtration efficiency: ≥ 98%.
Type II R: resistant to liquid splashes.

Sold by box - A case of 40 boxes with 50 masks.

Reference	Description
161321	Type IIR: Dark blue

PROTECTIVE MASKS

Our masks offer protection and meet the requirements of standard NF EN 14683*.

They are suitable for operating theatres and long-term use in clean rooms. They adapt to the face to prevent leakage. Breathability and softness. Filtration ≥ 98%.

** NF EN 14683 :
The standard classifies masks into 4 categories, including Type II, which offers filtration with a threshold > 98%.*

2-PLY MASK
White, non-woven face mask with built-in nose bridge. Wide-edged elastic fastening.

Sold by case - A box contains 100 units - A case contains 20 units

Reference	Description
161101	2-ply mask

BEARD GUARD
White beard guard with elastic band for optimum hold.

Sold by box.

Reference	Description
161440	Bag/100. Case/2000.

PROTECTIVE SLEEVE
Provides forearm protection in industrial food processing settings. Thickness of 20 µm. PE sleeve. Perfectly waterproof thanks to elastics at both ends. Dimensions: 220 x 440 mm.

Sold by case - Bag of 100 - Case of 2000

Reference	Description
161119	Opaque white

Protection

APRON
Embossed polyethylene apron for protection in medical and industrial settings. Thickness of 15 µm. Dimensions: 125 cm to 140 cm.

Sold by case – Bag of 100 – Case of 1000

Reference	Description
161103A	Opaque white, 125 cm
161105	Opaque white, 140 cm
161106	Opaque blue, 125 cm

DISPOSABLE COVERALLS
Coverall with hood, elasticated ends and front zip. White.

Sold by case – A case contains 50 units.

Reference	Description
161281	Microporous - 63 g/m²
161279	38 g/m²

GOWN
Visitor gown in non-woven polypropylene, tied at the waist and neck, with elastic cuffs. Designed to protect hospital visitors. Dimensions: 110 x 130 cm.

Sold by case – A case contains 100 units.

Reference	Description
161265/100	White
161266/100	Blue

VISITOR'S PROTECTION KIT

It is made of:
-1 visitor's gown
-1 bouffant cap
-1 paper mask
-2 shoe covers

Sold by case – A case contains 100 units.

Reference	Description
161201X	Visitor's kit

SHOE COVER

One-size shoe covers in polyethylene or non-woven with or without anti-slip. Meets users' needs in industrial, cleanroom, and hospital settings.

• White, non-woven

Sold by case – A case contains 10 units.

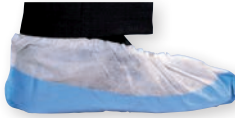

Reference	Description
161540	40 g/m2. Box of 100.
161540X	40 g/m2. Bag of 100.

• Blue polyethylene

Sold by case – Bag of 100 units.

Reference	Description
161104X	Case of 20.

• White and blue, non-slip

Sold by case – A case contains 400 units.

Reference	Description
161548X	18 x 38 cm

Our ESSENTIALS

PLASTIC AND WATERPROOF EXAMINATION COUCH ROLL

Super absorbent 28 g + 14 g, polyethylene side. Rolls of 50 or 75 cm wide.

Pre-cut every:
38 cm (180 formats)
114 cm (60 formats)
192 cm (40 formats)

Sold by case – A case contains 6 rolls.

Reference	Description	
121300	Blue.	180 formats 50 x 38 cm. Pallet/36 cases.
121301	Blue.	60 formats 50 x 114 cm. Pallet/36 cases.
121321	White.	40 formats 75 x 192 cm. Pallet/25 cases.

Formats 300
Rolls 6
Dimensions 50 x 35 cm
g/m² 2 x 18

1 COMPACT ROLL
Deux fois plus long qu'un rouleau de draps Twice as long as a traditional sheet roll. It saves directly on packaging (plastic, cardboard and paper) and facilitates storage. By using Compact Roll, you're directly contributing towards sustainable development. Width 50 cm. Pre-cut every 35 cm.

2 TRANSFER SHEET
Polypropylene non-woven transfer sheet. Dimensions: 150 x 217 cm Grammage: 70 g/m².

Formats 300
Rolls 6
Dimensions 50 x 30 cm
g/m² 2 x 18

3 COMPACT E-ROLL
Twice as long as a traditional sheet roll. It saves directly on packaging (plastic, cardboard and paper) and facilitates storage. 100% cellulose wadding. Width 50 cm. Pre-cut every 30 cm.

Formats 135
Rolls 9
Dimensions 50 x 35 cm
g/m² 2 x 18

4 EMBOSSED E-ROLL
2-ply, microembossed, glued. Highly resistant. Pure soft cellulose. Width 50 cm. Pre-cut every 35 cm.

Formats 150
Rolls 12
Dimensions 50 x 38 cm
g/m² 2 x 18

5 PREMIUM E-ROLL
100% cellulose wadding. White. Resistant and absorbent. Width 50 cm. Pre-cut every 38 cm.

Formats 150
Rolls 12
Dimensions 50 x 30 cm
g/m² 2 x 18

6 CLASSIC E-ROLL 150
2-ply. Resistant and absorbent. 100% cellulose wadding. Width 50 cm. Pre-cut every 30 cm.

Formats 135
Rolls 9
Dimensions 50 x 35 cm
g/m² 2 x 18

7 CLASSIC E-ROLL 135
2-ply. Comfort and resistance. 100% cellulose wadding. Width 50 cm. Pre-cut every 35 cm.

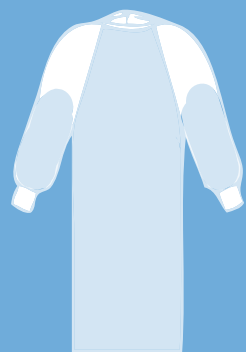

Formats 150
Rolls 12
Dimensions 50 x 38 cm
g/m² 2 x 18

8 ECO E-ROLL
Mixed cellulose wadding. White (2 x 18 g), resistant and highly absorbent. Width 50 cm. Pre-cut every 38 cm.

Sold by case.

Surgical clothes and surgical kit

THE HYPERIA LINE

The HYPERIA range of surgical clothes and kits is designed to meet the needs and constraints of surgical teams. The research into materials, the choice of parts and the development of products are the result of constantly feedback from our customers and are linked to the changing environment of new surgical techniques.

The materials used meet the regulatory requirements of European standard EN 13795. These define various characteristics whose values can be used to identify:

- Resistance to liquid penetration,
- Resistance to microbial penetration,
- Microbial cleanliness,
- Particulate cleanliness (particle release),
- Tensile strength, wet and dry,
- Burst strength, wet and dry.

Our choice was based on S.M.S (Spunbonded/Mel-blown/Spunbonded), both for gowns and drapes, with different grammages to meet the specific needs of each application. This material has the following properties:

- Good mechanical strength,
- Very low particle release,
- Good resistance to liquid penetration.

This last property will give complete satisfaction, our S.M.S being completed by reinforcements on the operating fields, using Spunlace, laminated with polyethylene making them ultra-absorbent and waterproof.

SURGICAL GOWN

Two axes of quality

1 Degree of protection

Surgical gowns play an important role in infection prevention by stopping the transfer of micro-organisms into the operating theatre.

It serves a dual purpose:

- Protect the patient by preventing the transfer of germs from the surgeon to the patient.
- Protect the surgeon from the transfer of liquids (blood, body fluids, chemicals), and micro-organisms.

2 Operator comfort (practitioner)

Operator comfort has a significant impact on performance and mainly depends on the thermal properties and design of the gown.

SURGICAL DRAPE

The new range of Euromedis surgical kits is designed to meet the different drape requirements for each of your needs.

- Drape architecture adapted to the type of procedure.
- Waterproof or airtight material depending on the procedure.
- A line to meet the needs of different surgical specialities.

THEIR STANDARD PERFORMANCE LEVELS

Exceeding the requirements of EN 13795 standards, they ensure:

- Physical barrier between patient and surgeon
- Resistance to liquid penetration
- Effective barrier against bacteria
- Microbiological cleanliness and very low particle release

1 GOWNS

Standard sterile cross-back or straight-back gown, with ultrasound-welded sleeves for strength and watertightness, elastic jersey sleeves, Velcro® collar closure, and sufficient length to fit the neckline.

2 STANDARD GOWN

Standard sterile cross-back surgical gown, with ultrasound-welded sleeves for strength and watertightness, elastic jersey sleeves, Velcro® collar closure, and sufficient length to fit the neckline.

4 STANDARD GOWN WITH THUMBHOLE

Standard sterile surgical gown with thumbhole, crossback, ultrasound-welded sleeves for strength and watertightness, elastic jersey cuffs, Velcro® fastener on collar, sufficient length to fit the neckline.

3 STANDARD PLUS GOWN

Standard sterile cross-back surgical gown, with ultrasound-welded sleeves for strength and watertightness, elastic jersey sleeves, Velcro® collar closure, and sufficient length to fit the neckline. Its specific treatment provides an excellent barrier.

5 REINFORCED GOWN

Reinforced surgical gown offering better protection than standard gowns, sterile with cross-back, ultrasound-welded sleeves for strength and watertightness, elastic jersey cuffs, Velcro® fasteners on collar, sufficient length to fit the neckline. Reinforced sleeves and bib with new micro-breathable film technology, guaranteeing excellent impermeability to liquids.

6 REINFORCED GOWN WITH THUMBHOLE

Reinforced surgical gown offering better protection than standard gowns, sterile with cross-back, ultrasound-welded sleeves for strength and watertightness, elastic jersey cuffs, Velcro® closure on collar, sufficient length to fit the neckline. Reinforced sleeves and bib with new micro-breathable film technology, guaranteeing excellent impermeability to liquids.

7 REINFORCED GOWN WITH THUMBHOLE AND BIB

Reinforced surgical gown offering better protection than standard gowns, sterile with thumbhole and bib, cross-back, ultrasound-welded sleeves for strength and watertightness, elastic jersey cuffs, Velcro® closure on collar, sufficient length to fit the neckline. Reinforced sleeves and bib with new micro-breathable film technology, guaranteeing excellent impermeability to liquids.

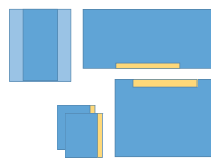

Sold by case - A case contains 40 units.

Surgical clothes and surgical kit

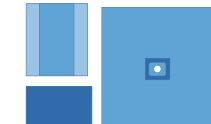

1 UNIVERSAL KIT
1 table cover 140 x 190 cm:
- 2 hand towels 36 x 40 cm,
- 1 adhesive strip 8 x 50 cm,
- 2 side drapes 75 x 100 cm,
- 1 foot drape 190 x 180 cm,
- 1 head drape 250 x 150 cm.

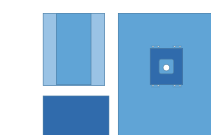

2 REINFORCED UNIVERSAL KIT
1 table cover 140 x 190 cm:
- 2 hand towels 36 x 40 cm,
- 2 adhesive strips 8 x 50 cm,
- 2 side drapes 110 x 100 cm, absorbent backing 40 x 68 cm adhesive on 110 cm,
- 1 foot drape 210 x 200 cm, absorbent backing 40 x 68 cm adhesive on 100 cm,
- 1 head drape 260 x 160 cm, absorbent backing 40 x 68 cm adhesive on 100 cm.

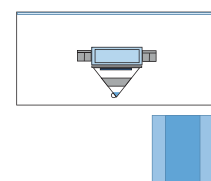

3 LIMB KIT
1 table cover 140 x 190 cm:
- 1 adhesive strip 8 x 50 cm
- 1 limb kit 300 x 240 cm
6 cm diameter elastic window

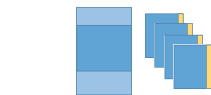

4 LIMB KIT
1 table cover 140 x 190 cm:
- 1 adhesive strip 8 x 50 cm
- 1 head drape 120 x 140 cm.
- 1 limb kit 300 x 240 cm
6 cm diameter elastic window

5 REINFORCED LIMB KIT
1 table cover 140 x 190 cm:
- 2 adhesive strips 8 x 50 cm,
- 1 head drape 120 x 140 cm.
- 1 limb drape 320 x 240 cm, 6-cm diameter off-centre elastic window, absorbent backing 70 x 110 cm with 4 tube holes

6 VERTICAL INSULATION KIT
1 table cover 140 x 190 cm:
- 2 hand towels 36 x 40 cm
- 1 adhesive strip 8 x 50 cm
- 1 clear polyethylene isolation drape 330 x 270 cm made of polyethylene with collection bag and stopcock, windowed incision field 25 x 80 cm
- 2 instrument pockets 25 x 27.5 cm

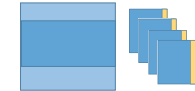

7 PARTITION KIT
1 table cover 120 x 140 cm:
- 4 drapes 75 x 90 cm adhesive on 90 cm.

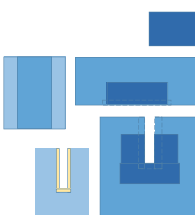

Sold by case. Bag of 1 with traceability label.

STERILE SINGLE-USE DRAPE
Single-use drape for minor surgery and one off procedures. Composed of an opaque polyethylene sheet lined with an absorbent cellulose sheet.

Sold by box.
A box contains 50 units - A case contains 4 boxes

Reference	Description
161600	40 x 45 cm
161601	45 x 75 cm
161602	75 x 90 cm

STERILE ADHESIVE DRAPE
With an adhesive strip running the length of the drape, enabling it to be attached to another drape, or to provide additional protection during surgery. Another advantage is that the drape does not slip during surgery.

Sold by box.
A box contains 50 units - A case contains 4 boxes

Reference	Description
161620	50 x 50 cm. 5 cm x 50 cm.
161621	50 x 70 cm. 5 cm x 70 cm.
161622	75 x 75 cm. 5 cm x 75 cm.
161623	75 x 90 cm. 5 cm x 90 cm.

STERILE DRAPE WITH WINDOW
Features a central opening of different sizes depending on the drape. Indicated for specific operations requiring local intervention with risk of heavy exudation.

Sold by box.
A box contains 25 units - A case contains 4 boxes

Reference	Description
161630	50 x 60 cm. Ø 6 cm.
161632	70 x 90 cm. 7 x 12 cm Orifice

ADHESIVE STERILE DRAPE WITH WINDOW
Combines the features of the windowed drape with the guarantee of fixation during surgery. Diameter 6 cm + adhesive 12 x 12 cm around the opening.

Sold by box.
A box contains 50 units - A case contains 4 boxes

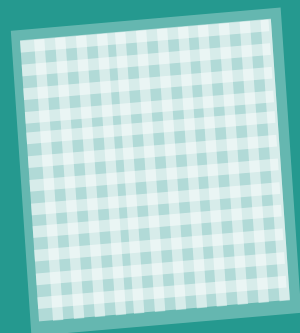

Reference	Description
161640	50 x 50 cm
161641	50 x 70 cm
161642	70 x 90 cm

TABLE DRAPES
The table drape provides perfect protection for instruments, sealing out bacteria and liquids while controlling them with its absorbent backing. Specially adapted for mute assistants.

Sold by case.

Swab

The quality of our products lies in their absorbency, comfort and softness. We recommend changing the swab at least once a day.

Gauze swab
• Made from spun and woven cotton

- Selection criteria:
 - Number of threads per cm² woven vertically and horizontally (13 threads or 17 threads).
 - Number of folds (8, 12, 16 folds). Folded swab with tucked edges
 - Final dimensions of the Euromedis swab (5 x 5 cm, 7.5 x 7.5 cm)
 - Our swabs are sterilised by EO (ethylene oxide).

- The woven swab is especially indicated for cleaning or protecting wounds with or without exudates.

- Intervention:
 - Procedure to clean and disinfect the wound
 - Drying a wound thanks to its high hydrophilicity
 - Dressing component

NF EN 14079 STANDARD

This standard describes the tests applicable to absorbent cotton gauze and absorbent cotton and viscose gauze, for example with regard to casting time or absorption capacity by volume and in the shortest possible time.

Non-woven swab

- Derived from bonded natural and/or synthetic fibres (viscose and polyester), less hydrophilic than the woven model, but more supple and resistant
- Selection criteria:
 - Material weight (30 g/m² or 40 g/m²)
 - Swab dimensions
 - Systematic 4-ply folding

- Intervention:
 - Dressing maintenance
 - Bandage holder

NF EN 1644-1 STANDARD

Test methods for medical non-woven swabs for the manufacture of swabs:

- Determination of the absorption time of a liquid
- Determination of a liquid's absorption capacity
- Determination of water-soluble substances
- Determination of fluorescence
- Determination of acidity and alkalinity of aqueous extracts

NF EN 1644-2 STANDARD

Test methods for medical non-woven swabs for finished swabs:

- Determination of liquid absorption capacity
- Determination of water-soluble substances
- Determination of fluorescence
- Determination of acidity and alkalinity of aqueous extracts
- Determination of burst strength
- Determination of particle release from wet and dry swabs

X-Ray swab

Swabs used in the operating theatre must be X-ray detectable. A multi-filament barium sulphate thread, opaque to X-rays, is woven into their weft. Double-wrapped and labelled for traceability, all swabs used during the operation can be recovered.

Laparotomy swabs

Suitable for laparotomy operations involving the absorption of large quantities of exudate. These swabs are washed beforehand and feature a mesh for easy removal. They are large in size.

ALL NON-WOVEN AND GAUZE SWAB CAN:

- Be sterile or non-sterile
- Come in single or double packaging
- Single-packed bag, by 2, 3, 5, 10

Dressing

STRIP: HOLDING SYSTEMS

Adhesive strips			
Characteristics	EUROFIX	ANAPORE PLASTERS	
	Can be removed without harming the skin	Microporous Anapore	Micro Anapore
		White non-woven backing	Micro-perforated polyethylene backing
Indications	Maintaining dressings put on 'strappings'	Sensitive skin	Dressing in need of ventilation

Non-adhesive bandages				
Characteristics	STRETCH GAUZE BANDAGES	CREPE BANDAGES	SURGIFIX® TUBULAR MESH	COHESIVE BANDAGE
	Latex-free, 100% stretchable Sterile or non-sterile	100% cotton or 97% cotton and 3% Spandex® 75 g/m² or 100 g/m²	Latex-free wide-mesh weft	Spandex fibres, does not stick to the skin
Indications	Maintenance of immobilisation dressings	Used in medical settings, immobilisation, compression	Maintaining dressings	Traumatology, phlebology, Dressing maintenance

The way in which dressings are applied depends on a number of factors:

- 1 High exudate emission or not
- 2 Wound size
- 3 Maintaining dressings

Our line meets all these requirements. Our products are suitable for all types of wounds and burns and comply with NF EN 13726-1/2 standards. These standards include the test methods for dressings in contact with the wound:

- Water vapour permeability
- Absorbency
- Conformability
- Antimicrobial barrier properties
- Odour control

LINE

EUROPLAIE®

Adhesive dressing:
Suitable for light wounds or post-operative wounds with low exudate emission. Non-woven (Europlaie®) or transparent (Europlaie® Film). Highly adhesive (acrylic glue) on 4 sides (high conformability), with absorbent pad covered with Mylar film to prevent adhesion to the wound.

LINE

EUROVIT+®

Non-adhesive dressing:
Suitable for large wounds or post-operative wounds with high exudate emission. Depending on the nature of the wound, it may be necessary to provide a perfect airtight seal (Eurovit® Blue) or to allow air to pass through to accelerate healing (Eurovit® plus).

LINE

MÉDI Tulle®

Suitable for burns and pressure sores. Sterile paraffin-impregnated dressing.

Indications:

- Burns
- Lacerations, abrasions, other wounds with loss of cutaneous substance due to burns

Dressing

RECOMMENDATION

We recommend changing the compress at least once a day.

MÉDITULLE®
Sterile oily compress. Wide cotton mesh impregnated with paraffin (Vaseline). Protective and non-adherent to the wound.

Sold by case.

EUROVIT® LINE

Absorbent dressing, sterile or non-sterile, does not stick to the wound, ‘American-style dressing’. Closed on all four sides, with a blue mesh on the outside for correct positioning. Consists of a soft, absorbent pad, covered with:

- inside: a cellulose film to allow exudates to diffuse.
- outside:
 - EUROVIT Bleu®: a polyethylene film, totally waterproof and non-reversible.
 - EUROVIT+®: a hydrophobic, air-permeable cellulose film.

• Non sterile	
Sold by case - Bag of 50 - Case of 10

Injection

PATHWAYS FOR DELIVERING SUBSTANCES TO THE BODY AND/OR EXTRACTING FLUIDS.

Needles are used for the delivery of substances and adapt to syringes, pens, and injection guns. micro-infusion sets and infusion sets. Sampling units are used for fluid puncture.

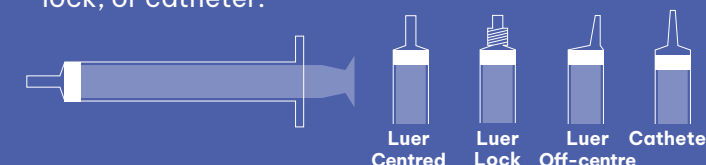

Choosing a syringe

NF EN ISO 7886 -1/-2

- 2-part syringe: plunger + bod

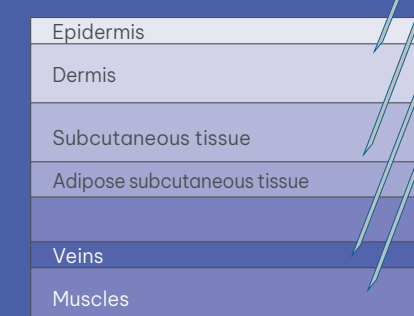

- 3-part syringe: plunger + elastomer + body
The tip can be centred, off-centre, luer slip, luer lock, or catheter.

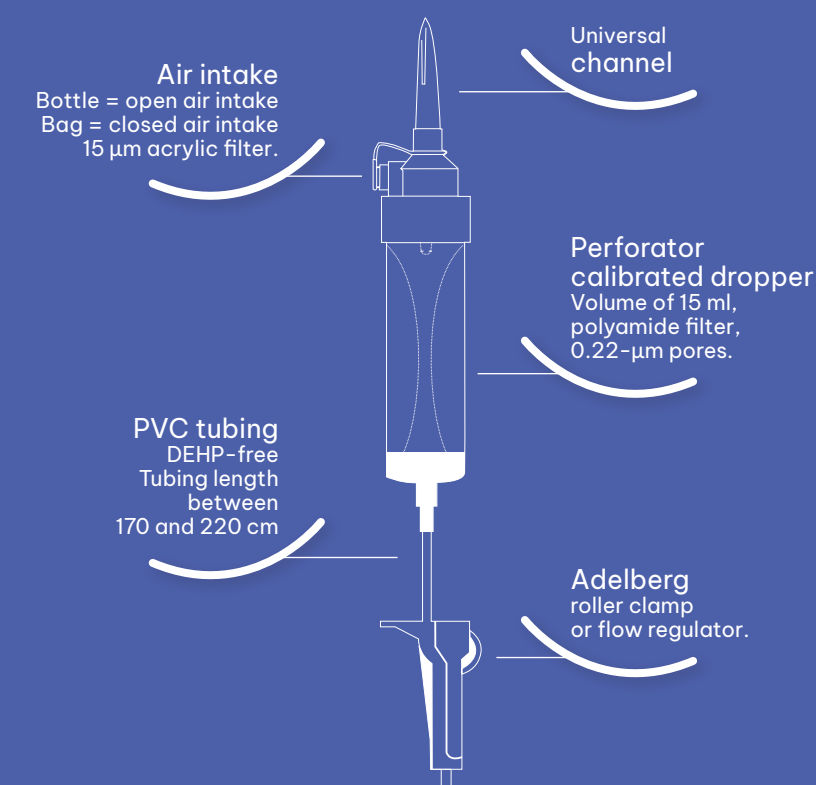

Graduation can be in ml (hypodermics, tuberculin) or units (insulin). Adapted to electric syringe drivers for very precise flow rates.

Choosing a needle

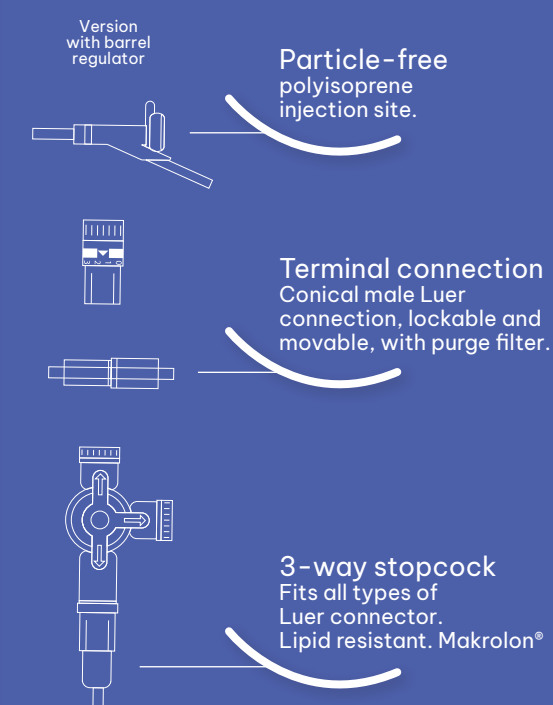

- Gauge
(internal needle Ø associated colour code)
 - cannula length
 - needle bevel (atraumatic)
- NF EN ISO 78644**

PARTS

i Infusion sets meet the physical, chemical, and biological testing requirements of **NF EN ISO 8536-4**.

Injection

SPECIAL PHLEBOLOGY
NEEDLE EUROFINE®

Sterile stainless-steel needle. Yellow poly-propylene base. Normal bevel. 12 x 0.3

Sold by box - A box contains 100 units - A case contains 2000 units

i

DELTA VEN® CATHETER

Advantages of the polyurethane (PUR) catheter:
High compatibility with medications, biocompatibility for long-term IV maintenance. Flexibility for easy adaptation of the catheter to the vein. Elasticity to quickly return the catheter to its original shape, with consequent restoration of normal flow in the event of involuntary patient movement causing catheter kinking. Smooth and soft surface to reduce the risk of thrombosis and phlebitis. Easy insertion. Resistant to kinking. Becomes even more flexible with heat from the human body.

General characteristics of the intravascular catheter:
‘Back-Cut’ needle sharpening. Atraumatic catheter tapering. Optimal distance between the cannula and the needle tip. Thin-walled catheter with 3 radiopaque stripes. Transparent viewing chamber for immediate control of blood return. Removable microporous filter for a reliable seal, eliminating the risk of contamination. Available with a Luer Lock cap to close the proximal part of the catheter after needle removal. Oneway plugs available for all sizes (except 26 G).

DELTA SELFSAFE® CATHETER

Safety catheter with passive activation of the safety device, available in sizes 14 G to 24 G. The safety IV catheter drastically reduces the risk of accidental pricks and requires no change in procedures compared to conventional models.

The safety device encloses the needle tip, making handling more hygienic. It is completely free of metal parts to ensure complete operator protection. Prevents the risk of accidental pricks even when disposing of the IV catheter. Polyurethane (PUR) catheter see previous page for characteristics.

i

SITTING DOWN AND GETTING UP BECOMES CHILD'S PLAY!

How to choose the right lift chair?

- Measure the space: it is advisable to allow between 45 and 65 cm at the back of the chair so that it can be used easily in different positions.
- Choose a chair that is adapted to the user's morphology so that they can be comfortably seated or lying down.

The different positions :

Positions
1-motor chair

Positions
2-motor chair

CATHETERS AND DRAINAGE

100% silicone Foley catheter	68
Latex silicone Foley catheter	68
PVC catheter	69
Urine bag	68
Urine bag holder	68

URINARY TRACT | RECTAL TRACT RESPIRATORY TRACT

The purpose of catheterisation is to remove an obstacle preventing breathing, urination, or bowel movements.

Urinary catheterisation:

NF EN ISO 20696 standard

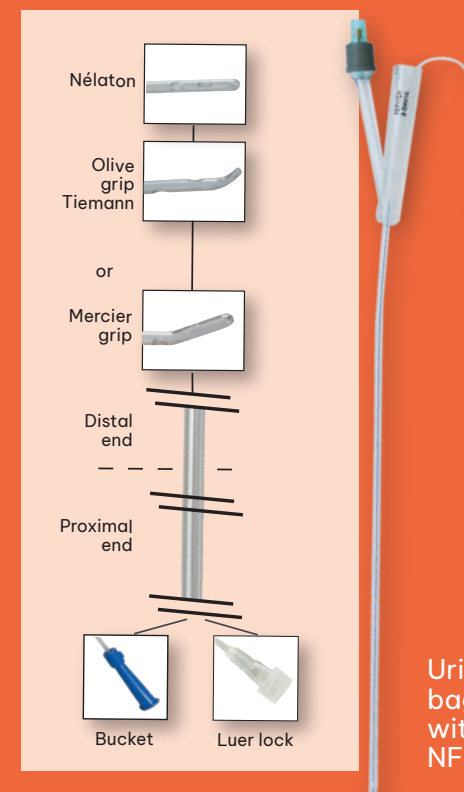

- Punctual (1 to 3 hours) performed with a simple catheter
- Intermittent (< 24 hours)
 - in the case of urine collection, the bucket is adapted to the connection with the urine bags
 - Luer lock connection in case of use for the realisation of a urodynamic assessment
- Indwelling (> 24 hours to 30 days): Foley catheter in latex or silicone. Justified in case of serious trauma

Main criteria for choosing Foley catheters:

- Balloon volume: 5 to 15 ml for men, 3 to 5 ml for children
- Materials:
 - < 3 weeks coated latex, if > silicone
 - 2 ways bladder emptying

Choosing a catheter:

- Length (40 cm men, 20 cm women)
- Outer diameter = Charrière (1 ch = 0.33 mm)
- Materials:
 - for punctual catheterisation: PVC
 - for indwelling catheterisation: latex or silicone

Urine collection bags must comply with Standard NF ISO 8669-1.

CATHETERISATION & SYSTEM

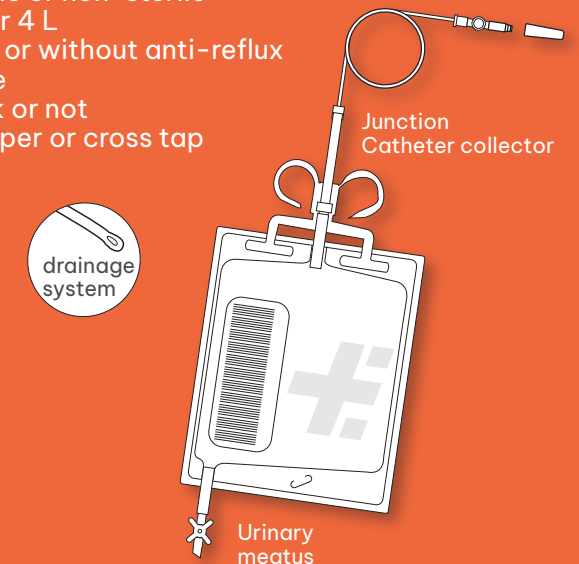

The closed system corresponds to the assembly of several elements that must never be separated.

Choice of bags:

- In the case of chronic incontinence, 2-L bags will be used as a 'night bags' for urine collection. These bags are non-sterile, drainable and have an anti-reflux valve.
- In the case of bedridden patients following surgery and for all catheterised patients, urine bags will be sterile, with a volume of 2 L or 4 L with anti-reflux valves, a system for attaching to the bed and sheet, a needle-free sampling system and a bacterial filter.
- For long-term catheterisation, it is necessary to define a change rhythm according to the department protocol, for example: every month for silicone catheters. The continuation of the catheterisation is to be redefined daily according to the patient's condition, between the doctor and the nurse.

Main selection criteria :

- Sterile or non-sterile
- 2 L or 4 L
- With or without anti-reflux valve
- Hook or not
- Clapper or cross tap

PRACTICAL AND EFFICIENT TAP

- Simple in its design, it allows to secure the opening and closing of the tap.
- Efficient because only one hand is needed to close or open it
- Safe, because it reduces the risk of unwanted emptying

Catheters and drainage

EUROBAG® STERILE URINE BAG
Urine bag. With needle-free sampling site, clamp and single-handed tap. 2 litre sampling site.

Sold by case – A case contains 50 units.

OXYGEN

Oxygen cannula	71
Oxygen mask	71
Oxygen tube	71

OXYGEN THERAPY IS A METHOD OF ARTIFICIALLY GIVING A PATIENT OXYGEN TO RESTORE OR MAINTAIN A NORMAL LEVEL OF OXYGEN IN THEIR BLOOD.
THIS SUPPLY IS GIVEN VIA:

- An oxygen cannula
- A nasal oxygen cannula
- An oxygen mask

Oxygen cannulas
They are adapted to provide a low flow rate: 0.5 to 3 L/min. PVC composition with or without DEHP, ‘odourless’, supplied with straight or curved tip, with or without 2 m connection tube.

Simple oxygen masks
• The single mask has side openings without a flexible valve. They are suitable for medium flow: 4 to 8 L/min
• Change your mask daily
• For adults or children, with nose clip and safety elastic Mainly made of ‘odourless’ PVC

Nasal oxygen cannula
They are used to feed patients with respiratory deficiencies. Supplied with or without mobile buffer.

OXYGEN CANNULA

For adults and children. Connected to a 2-m tube for connection to all types of oxygen cylinder holders or extractors and fitted with different types of nose piece.

Sold by case - A case contains 50 units.

Reference	Description
156100	Adult straight tip with 2-m tube
156112	Adult curved tip with 2-m tube
156101SD	Paediatric straight tip with 2-m tube DEHP-free Soft

OXYGEN MASK

For adults and children. Anatomically well designed, with nose clip and safety elastic. With or without tubing, it remains in position. The main material used is PVC.

Sold by case - A case contains 50 units.

Reference	Description
156102	2.00 m tube for adults (with chin guard)

OXYGEN TUBE

Oxygen supply for patients with respiratory difficulties, this device can be supplied with or without a mobile buffer. 40 cm.

Sold by bag - Bag of 100 - Case of 500.

Reference	Description
174300	Multi-perforated distal opening. CH 08

Sold by box - A box contains 100 units - A case contains 600 units

Reference	Description
174303B	Multi-perforated distal opening. CH 10
174304B	Multi-perforated distal opening. CH 12
174305B	Multi-perforated distal opening. CH 14
174306B	Mobile foam pad. CH 10
174307	Mobile foam pad. CH 12
174308	Mobile foam pad. CH 14
174301F	Fixed foam pad. CH 08
174306F	Fixed foam pad. CH 10
174307F	Fixed foam pad. CH 12
174308F	Fixed foam pad. CH 14

PLASTIC AND CELLULOSE LINE

Denture box	73
Disposable kidney dish	73
Id wristband	73
Single-use urinal.....	73
Spittoon with lid	73

Plastic and cellulose

SINGLE-USE PRODUCTS

Mainly in cellulose for single applications. For repeated use, plastic products are preferable, as they can be recycled and heat-sterilised.

Our products are particularly well suited to patients who are bedbound or have difficulty moving around.

SPITTOON WITH LID
White, graduated spittoon from 0 to 150 ml, with lid.
Dimensions: 6.5 x 6 cm.

Sold by case – Bag of 40 – Case of 400

Reference
125134

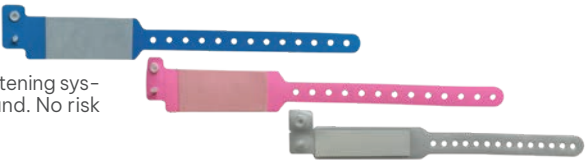

MOULDED FIBRE PRODUCTS (CELLULOSE) for patient hygiene.

Compliant with PAS29 standard. Products must be watertight for at least 4 hours. After this period, we recommend emptying and/or destroying the container to avoid leakage.

ID WRISTBAND

Practical, quick and tamper-proof fastening system. Only scissors can release the band. No risk of cuts or irritation.

Sold by box – A box contains 100 units – A case contains 1000 units

Reference	Description
167100	Adult Transparent
167101	Child Transparent
167110	Adult Blue – waterproof
167112	Child Blue – waterproof
167113	Child Pink – waterproof

DENTURE BOX
Protective packaging for dentures with lid.
Diameter: 60 mm
Height: 100 mm

Sold by case – Bag of 50 – Case of 250

Reference
125145

**DISPOSABLE KIDNEY DISH
MADE OF POLYPROPYLENE**
Autoclavable at 120°C. White.
Dimensions: 24 x 14 x 4 cm.

Sold by case – Bag of 120 – Case of 1080

Reference
125135

**DISPOSABLE KIDNEY DISH
IN MOULDED CELLULOSE**
Waterproof for up to 4 hours. 750 ml capacity.
Dimensions: 253 x 146 x 44 mm.

Sold by case – A case contains 320 units.

Reference
125137A

SINGLE-USE URINAL
In gray cellulose.
Dimensions: 256 x 111 x 123 mm.

Sold by case – A case contains 100 units.
